HENNY TASKER

DESIGN THINKING FOR A THINKING WORLD

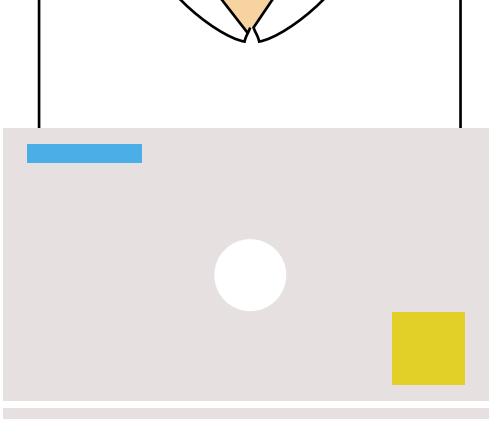

Welcome to my portfolio! My work sits at the intersection of UX Design and Human-Computer Interaction. I'm fascinated by how humans learn online - both in academic settings and in the corporate world. Explore my work below, or [contact me directly](#) to learn more.

ABOUT

Hello! My name is Henny Tasker and I am a Master's student at the University of Michigan concentrating in UX Research and Design, with a secondary focus on Human-Computer Interaction. I love learning about people's passions! What makes a person excited about new technology and ways of doing things? What makes a

person dread change? How do people learn online?

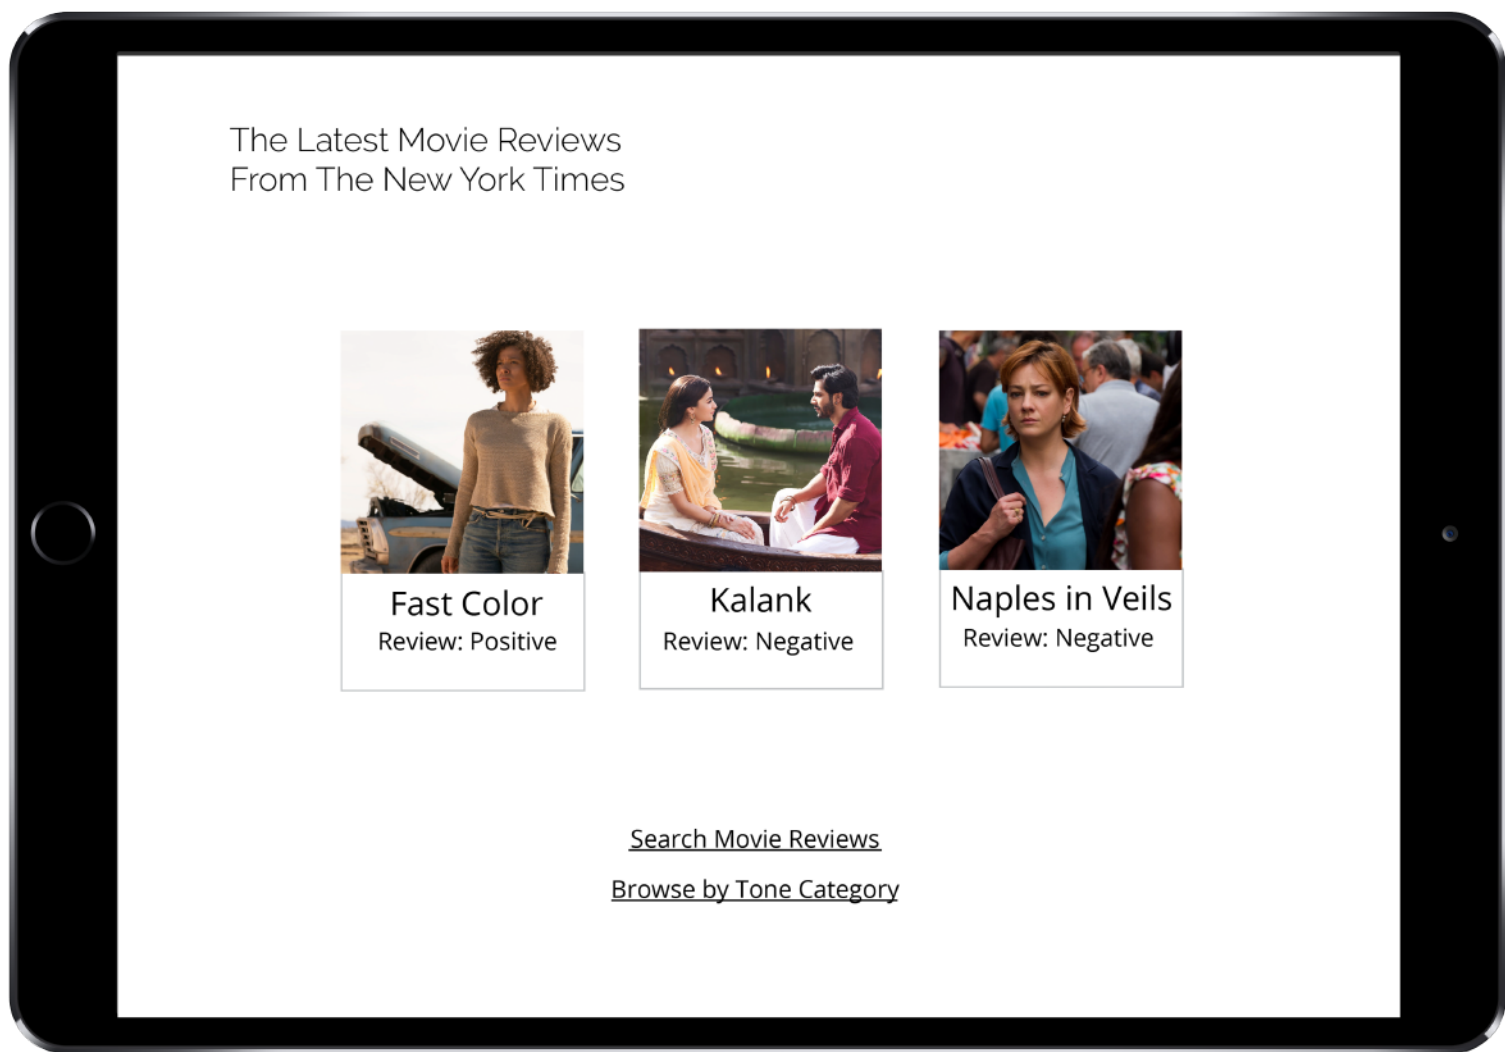

I hold degrees in History, Museum Studies, and New Media Writing. My career started in the Philippines, where I taught English and computer literacy as a Peace Corps Volunteer.

Back stateside, I worked as an Instructional Designer in Higher Education. These experiences have left me with a desire to explore diverse online learning environments and to design computer systems for the variety of ways in which people learn.
